

Source Code & Builds

Unity 6 LTS · C# · Windows + Mac builds · WebGL via Unity Play

Play in Browser (Unity Play)

► [Play Phantoma in your browser](#) →

Replace `ADD_UNITY_PLAY_LINK_HERE` with the share URL after uploading the WebGL build to [play.unity.com](#). Tip: on first load, click once to capture the mouse (browsers require a click before pointer-lock).

Repository

[github.com/DavidFgamedev/phantoma-unity](#) – full Unity project source.

Downloadable Builds

- **Windows** – [Phantoma-Windows.zip](#)
- **Mac (Apple Silicon + Intel, universal)** – [Phantoma-Mac.zip](#)

Replace the build links with their GitHub Release / Google Drive URLs. Mac builds may need a right-click → Open the first time (unsigned).

My Lines of Code – 681 total (529 net)

All hand-written by me, in `Assets/Scripts/` and `Assets/Editor/`. Unity templates and packages are not counted.

FILE	LINES
<code>Editor/LocomotionAutoAssign.cs</code> – animation auto-import + blend-tree builder	201
<code>Scripts/PlayerController.cs</code> – movement, sprint, jump, gravity	125
<code>Scripts/PlayerInteractor.cs</code> – landmark detection + prompt/message HUD	115

<code>Scripts/OrbitCameraRig.cs</code>	– mouse/stick orbit camera	88
<code>Scripts/HUDController.cs</code>	– stamina arc + glow	74
<code>Scripts/StartMenu.cs</code>	– title screen / scene load	49
<code>Scripts/Interactable.cs</code>	– landmark data + interact hook	29
Total		681

Enhanced from the Phase 1 draft: real scripts and verified line counts, plus the new Unity Play in-browser build.
